Medicare Part D Formulary Changes

The formulary is a complete list of drugs covered by your Part D plan. We make changes to the formulary or Drug List at the beginning of the year (January 1) and occasionally, the plan will need to make changes to the formulary during the year. Some changes that may affect you:

- New generic or biosimilar drug - a brand name drug or an original biologic product may be removed from the formulary if we replace it with a newly approved generic version of the brand name drug or a new biosimilar of the original biological product. The new generic drug or biosimilar will be on the same or lower cost sharing tier and have the same or fewer restrictions as the brand name drug or original biological product. We may decide to keep the brand name drug or original biological product on our formulary, but immediately move it to a higher cost-sharing tier or add new restrictions.
- Drugs removed from the market - if the Food and Drug Administration (FDA) deems a drug on our formulary to be unsafe or the drug's manufacturer removes the drug from the market, we will immediately remove the drug from our formulary.
- Drugs with new restrictions - if the FDA or manufacturer releases FDA boxed warnings or new clinical guidelines that are recognized by Medicare, we will make the changes to the drug on our formulary.

Below are the upcoming formulary changes of commonly used drugs for a 5 tier plan.

Effective date	Drug Name	Formulary change	Alternative Drug(s)*
