**MEDICARE ADVANTAGE MEMBERS are covered for Telemedicine under the Supplemental benefit of remote access technologies which provides the same benefits as commercial policies**

**POLICY STATEMENT:**

I. The Health Plan offers telemedicine services, including services via a telemedicine vendor, in accordance with the member’s subscriber contract.

II. When telemedicine vendor program providers are not utilized the following criteria will apply.

   A. Originating and Distant Site defined:
      1. An “originating site” is where the patient is located at the time the service is being furnished via a Health Insurance Portability and Accountability Act (HIPAA) compliant telecommunications system; such as, but not limited to, a practitioner’s office, a hospital, a health clinic, a skilled nursing facility within the state of New York, or the patient’s home located within the state of New York or other temporary location located within or outside the state of New York.
      2. A “distant site” is where the practitioner providing the professional service is located at the time the service is provided via a HIPAA compliant telecommunications system.

   B. Based upon our criteria, the following telemedicine and telehealth services using a synchronous (real-time) telecommunications system to substitute for an in-person encounter are considered medically appropriate when services are telecommunicated from an originating site to a distant site, when the patient is present and participating in the visit, and when benefits are available in accordance with the member’s subscriber contract:
      1. Consultations,
      2. Initial or follow-up inpatient telehealth consultations,
      3. Office or other outpatient visits,
      4. Subsequent hospital or skilled nursing facility care services (with the limitation of one telehealth visit every 3 days),
      5. Individual psychotherapy or psychiatric diagnostic interview examination,
      6. Pharmacologic management,
      7. Individual and group medical nutrition education,
      8. Individual and group diabetes self-management training services.

   C. Based on our criteria, the use of asynchronous (e.g., store and forward) telecommunication systems are considered medically appropriate in accordance with the criteria listed in Policy Statement II when:
      1. The use of the telecommunication system addresses a care access issue within the designated population; and
      2. The medical literature on the use of the asynchronous technology has demonstrated favorable impacts on health outcomes for a specific patient population (e.g., acute illnesses in the pediatric age group); and
      3. The originating site must involve a health care professional (e.g., school nurse, trained and certified telemedicine technician) who initiates and manages the telecommunication services; and

Proprietary Information of Excellus Health Plan, Inc.

A nonprofit independent licensee of the BlueCross BlueShield Association
4. The telecommunication system is capable of providing clear audio and video communication with a digital camera with attachments designed to capture pertinent clinical findings such as ear, nose, throat skin, eyes and electronic stethoscope; and

5. The clinical evaluation must occur and be communicated back to the patient within the same business day.

D. Based on our criteria, when the originating site is a personal originating site (e.g., the patient’s home or worksite) subsequent, ongoing care by a provider, for long distance relationships, is considered medically appropriate only if there are arrangements for handling emergency situations locally that are consistent with established local care practice.

E. Based upon our criteria and review of the peer-reviewed literature, telemonitoring home care services, including equipment and related professional services (patient training, interpretation of data, and consultation with the patient) are not medically necessary.

**POLICY GUIDELINES:**

I. Refer to the member’s subscriber contract for specific contract benefits and limitations, including member deductibles and co-payments for services rendered.

II. The patient must provide consent, prior to the telecommunication services being rendered, acknowledging the service will be considered as an evaluation and management service by the practitioner.

III. The clinical/distant site must develop a process for obtaining co-payments and deductibles, where applicable per member contract.

IV. Providers rendering telemedicine services must verify with the Health Plan that they utilize HIPAA compliant telecommunication systems/devices.

**DESCRIPTION:**

Telehealth, telemedicine and telemonitoring all utilize interactive telecommunication in order to provide designated services.

“**Telehealth**” includes a broad range of electronic information and communication technologies that support and promote long-distance health care services by a health care provider which includes the assessment, diagnosis, consultation, treatment, education, care management and/or self-management of a patient. Telehealth health care is not delivered by means of facsimile machines or electronic messaging alone, although these technologies can be used if combined with telemedicine, store and forward technology, or remote patient monitoring. Telehealth offers a convenient way for a health care provider to deliver health care services without having to worry about the logistics of travel.

“**Telemedicine**” is a subset of telehealth that uses interactive telecommunication devices between a patient and a healthcare professional for the purpose of delivering clinical health care services that include assessment, diagnosis and treatment of the patient. Interactive telecommunication devices consist of equipment capable of transmitting two-way, real-time (synchronous) communications between a patient (originating site) and healthcare professional (distant site). Telemedicine can offer a convenient method of delivering healthcare to patients in rural or underserved areas that may otherwise have limited or no access to the healthcare professionals they need.

“**Store and forward technology**” means the asynchronous, electronic transmission of a patient's health information in the form of patient-specific digital images and/or pre-recorded videos from a provider at an originating site to a telehealth provider at a distant site.
"Remote patient monitoring" (Telemonitoring), is the use of synchronous or asynchronous electronic information and communication technologies to collect personal health information and medical data from a patient at an originating site that is transmitted to a telehealth provider at a distant site for use in the treatment and management of medical conditions that require frequent monitoring (such as blood pressure checks, weight checks via a telescale). Such conditions include, but are not limited to, congestive heart failure, diabetes, chronic obstructive pulmonary disease, wound care, polypharmacy, mental or behavioral problems, and technology-dependent care such as continuous oxygen, ventilator care, total parenteral nutrition or enteral feeding. Remote patient monitoring shall be ordered by a physician licensed pursuant to article one hundred thirty-one of the education law, a nurse practitioner licensed pursuant to article one hundred thirty-nine of the education law, or a midwife licensed pursuant to article one hundred forty of the education law, with which the patient has a substantial and ongoing relationship.

There are numerous types of telemedicine, telehealth and remote patient monitoring (telemonitoring) services available with additional services that are emerging or under development. These services include, but are not be limited to:

I. Healthcare visits which encompass e-visits, telephone visits, web visits (including post-surgical follow-up visits) and kiosk care such as onsite or employer-based clinic services.

II. Diagnostics which include remote diagnostic services such as tele-radiology, tele-pathology and tele-echocardiography.

III. Disease and chronic conditions management services (e.g., patients with CHF, diabetes, needing tele-mental health, tele-physical rehabilitation or therapy).

IV. Remote healthcare professional coverage for rural and underserved areas, as well as access to consultations with medical specialists or experts that are out of the service area and remote critical care monitoring (e-ICU) for patients in hospitals.

V. Mobile healthcare delivery through smart phone applications promoting health, patient medication compliance and allowing the transfer of medical data and images.

VI. Electronic messaging through the use of emails and texting between a patient and a clinician which may include medication reminders and medical appointment reminders.

In accordance with New York State regulations, for new or renewing commercial policies on or after January 1, 2016, coverage may not be excluded for services delivered via telehealth. Coverage may be subject to member cost-sharing, as long as it is at least as favorable to the member as the cost-sharing established for the same service when not delivered via telehealth. Coverage may also be subject to reasonable utilization management and quality assurance requirements that are consistent with those established for the same service when not delivered via telehealth.
Eligibility for reimbursement is based upon the benefits set forth in the member’s subscriber contract.

CODES MAY NOT BE COVERED UNDER ALL CIRCUMSTANCES. PLEASE READ THE POLICY AND GUIDELINES STATEMENTS CAREFULLY.

Codes may not be all inclusive as the AMA and CMS code updates may occur more frequently than policy updates.

Code Key: Experimental/Investigational = (E/I), Not medically necessary/ appropriate = (NMN).

The following codes are specific to Telemedicine/Telehealth:

**HCPCS:**
- G0406-G0408 Follow-up inpatient telehealth consultation (code range)
- G0406-G0408 Follow-up inpatient telehealth consultation (code range)
- G0425-G0427 Emergency department or initial inpatient telehealth consultation (code range)
- G0425-G0427 Emergency department or initial inpatient telehealth consultation (code range)
- G0459 Inpatient telehealth pharmacologic management, including prescription, use, and review of medication with no more than minimal medical psychotherapy
- G0508 Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth
- G0509 Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth
- G9868 Receipt and analysis of remote, asynchronous images for dermatologic and/or ophthalmologic evaluation, for use under the Next Generation ACO model, less than 10-20 minutes. *(effective 1/1/18)*
- G9869 Receipt and analysis of remote, asynchronous images for dermatologic and/or ophthalmologic evaluation, for use under the Next Generation ACO model, 10-20 minutes. *(effective 1/1/18)*
- G9870 Receipt and analysis of remote, asynchronous images for dermatologic and/or ophthalmologic evaluation, for use under the Next Generation ACO model, 20 or more minutes. *(effective 1/1/18)*
- Q3014 Telehealth originating site facility fee
- S9110 (NMN) Telemonitoring of patient in their home, including all necessary equipment; computer system, connections, and software; maintenance; patient education and support; per month

**NOTE:** THE FOLLOWING CODES ARE NOT SPECIFIC TO TELEMEDICINE/TELEHEALTH SERVICES AND SHOULD BE IDENTIFIED UTILIZING ONE THE FOLLOWING MODIFIERS IF USED FOR TELEMEDICINE/TELEHEALTH SERVICES:

**MODIFIERS:**
- **95** Synchronous telemedicine service rendered via a real-time interactive audio and video telecommunications system *(effective 1/1/17)*
  Note: Refer to CPT Appendix P for codes for which modifier 95 may be used with.
- **GQ** Via asynchronous telecommunications system
- **GT** Via interactive audio and video telecommunications system
