POLICY STATEMENT:

I. Based upon our criteria and the assessment of peer-reviewed literature, monitored Phase I and Phase II cardiac rehabilitation programs have been proven to be medically effective and are therefore, medically appropriate for patients with the following:
   A. Acute myocardial infarction within the preceding 12 months;
   B. Angioplasty with stenting within the preceding 12 months;
   C. Coronary angioplasty within the preceding 12 months;
   D. Coronary bypass surgery within the preceding 12 months;
   E. Heart transplantation within the preceding 12 months;
   F. Class II or higher congestive heart failure;
   G. Stable angina pectoris; or
   H. Valvular disease.

II. Based upon our criteria and the assessment of peer-reviewed literature, Phase III maintenance programs are not medically necessary.

Maintenance programs are programs that consist of activities that preserve the patient’s present level of function and prevent regression of that function. Maintenance begins when the therapeutic goals of a treatment plan have been achieved or when no additional functional progress is apparent or expected to occur.

POLICY GUIDELINES:

I. Due to a strong scientific evidence base for the efficacy of cardiac rehabilitation in adult patients and the lack of a strong evidence base in pediatric patients, this policy generally applies to adult patients. Cardiac rehabilitation for pediatric patients will be reviewed based on clinical indicators including, but not limited to: the patient’s diagnosis (e.g., congenital anomalies, valvular disorders), recent surgical procedures (e.g., cardiac transplant, valvular replacement or repair), and acceptance into a pediatric cardiac rehabilitation program.

II. Monitored Phase II cardiac rehabilitation programs must be recommended by the patient’s cardiologist or primary care physician and rendered by a provider whose cardiac rehabilitation program has been approved by:
   A. the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) if the program is rendered at an outpatient free-standing facility or in the practitioner’s office; or
   B. the AACVPR, the Joint Commission on Accreditation of Healthcare Organizations (JCAHO), or the American Osteopathic Association (AOA) if the program is rendered at a hospital-based facility.

III. Due to the increased risk of experiencing a cardiac event (e.g. ventricular arrhythmia, infarction) Phase II cardiac rehabilitation programs must include physician supervision and continuous electrocardiographic monitoring during exercise.

IV. The Phase II program usually consists of 36 visits.

V. Only one program of cardiac rehabilitation will be allowed per lifetime unless otherwise approved by a Health Plan Medical Director (e.g., another qualifying cardiac event).
VI. Benefits for cardiac rehabilitation will be provided in accordance with the member’s subscriber contract. Please contact your local Customer (Provider/Member) Service Department to determine contract coverage as not all contracts provide coverage for cardiac rehabilitation.

DESCRIPTION:

According to the US Public Health Service, the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR), the American College of Cardiology (ACC), and the American Heart Association (AHA) “Cardiac rehabilitation (CR) services are comprehensive, long-term programs involving medical evaluation, prescribed exercise, cardiac risk factor modification, education, and counseling. These programs are designed to limit the physiologic and psychological effects of cardiac illness, reduce the risk for sudden death or re-infarction, control cardiac symptoms, stabilize or reverse the atherosclerotic process, and enhance the psychosocial and vocational status of selected patients”.

A cardiac rehabilitation program should be initiated as soon as medically indicated following a cardiac event. Examples of cardiac events are acute myocardial infarction, coronary artery bypass graft, percutaneous transluminal coronary angioplasty (PTCA), heart valve surgery, heart transplantation, stable angina pectoris or compensated heart failure.

Cardiac Rehabilitation consists of three phases, or levels, of service:
I. **Phase I**, or inpatient CR: a program that delivers preventive and rehabilitative services to hospitalized patients following an index cardiovascular disease (CVD) event.
II. **Phase II**, or early outpatient CR: a physician supervised outpatient program that includes electrocardiographic monitoring during exercise and is intended to improve cardiac function and exercise tolerance. Programs are hospital or physician office/clinic based and must meet federal and state regulatory and licensing requirements; and
III. **Phase III**, or long-term outpatient CR: a supervised or non-supervised maintenance program.

RATIONALE:

Cardiac rehabilitation program providers are subject to state and federal licensing requirements. Due to the advances in the diagnosis and treatment of cardiac disease there is a shift of cardiovascular disease from an acutely fatal event to a chronic disease. There is a growing need for medical services to aid patients in improving their quality of life, lessen symptoms, increase functional capacity and decrease disability. Formal cardiac rehabilitation programs meet this need, for select cardiac patients, and improve the net health outcome by decreasing the incidence of cardiac death.

The benefits of formal cardiac rehabilitation programs outweigh those of informal exercise programs or the lack of a rehabilitative program. Through clinical trials, supervised/formal cardiac rehabilitation programs have been proven to improve the health outcomes of select cardiac patients.

CODES:

<table>
<thead>
<tr>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>93797</td>
<td>Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)</td>
</tr>
<tr>
<td>93798</td>
<td>with continuous ECG monitoring (per session)</td>

</tbody>
</table>

Eligibility for reimbursement is based upon the benefits set forth in the member’s subscriber contract.

CODES MAY NOT BE COVERED UNDER ALL CIRCUMSTANCES. PLEASE READ THE POLICY AND GUIDELINES STATEMENTS CAREFULLY

Codes may not be all inclusive as the AMA and CMS code updates may occur more frequently than policy updates.

CPT: 93797, 93798

HCPCS: S9472
G0422 Intensive cardiac rehabilitation; with or without continuous ECG monitoring with exercise, per session

G0423 Intensive cardiac rehabilitation; with or without continuous ECG monitoring; without exercise, per session

**ICD9:**

394–396.9 Diseases of mitral and/or aortic valves (code range)

397–397.9 Diseases of endocardial structures (code range)

410-410.9 Acute myocardial infarction (code range)

412 Old myocardial infarction

413-413.9 Angina pectoris (code range)

414–414.9 Other forms of chronic ischemic heart disease (code range)

424.0-424.3 Valve disorders (code range)

428.0 Congestive heart failure

V43.2 Organ or tissue replaced by other means, heart

V43.3 heart valve

V45.81 Other postsurgical status, aortocoronary bypass

V45.82 percutaneous transluminal coronary angioplasty

**ICD10:**

A52.03 Syphilitic endocarditis

I01.1 Acute rheumatic endocarditis

I02.0 Rheumatic chorea with heart involvement

I05.0-I09.9 Rheumatic heart disease (code range)

I20.1 Angina pectoris with documented spasm

I20.8-I20.9 Other or unspecified forms of angina pectoris (code range)

I21.01-I21.3 ST elevation (STEMI) myocardial infarction (code range)

I214 Non-ST elevation (NSTEMI) myocardial infarction

I220-122.9 Subsequent ST (STEMI) or non-ST (NSTEMI) elevation myocardial infarction (code range)

I25.10-I25.9 Chronic ischemic heart disease (code range)

I34.0-I34.9 Nonrheumatic mitral valve disorders (code range)

I35.0-I35.9 Nonrheumatic aortic valve disorders (code range)

I36.0-I36.9 Nonrheumatic tricuspid valve disorders (code range)

I37.0-I37.9 Nonrheumatic pulmonary valve disorders (code range)

I50.1-I50.9 Heart failure (code range)

Q23.2 Congenital mitral stenosis
Z95.1  Presence of aortocoronary bypass graft
Z95.2  Presence of prosthetic heart valve
Z95.5  Presence of coronary angioplasty implant and graft
Z95.812  Presence of fully implantable artificial heart
Z98.61  Coronary angioplasty status
